                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CDS
                                                                                                                                                                                                                                                                                                     This sequence encodes a fusion between bovine gamma interferon (IFNgamma) and Pasteurella haemolytica leukotoxin (LTK). The leukotoxin gene, IthA, was isolated from a gene library of P. haemolytica by chromosome walking. Immunogenic fusion proteins such as this can be used in vaccine compositions. It can also used to raise mono- and polyclonal antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     monoclonal;

                                                                                                                                                                 AAT60032 and AAT60033 represent the coding sequences for immunogenic chimeric proteins of the invention. This sequence represents a chimeric protein containing the bovine gammainterferon (gamma IFN) sequence and a leukotoxin sequence. The chimeric proteins of the invention comprise a cytokine, selected from interleukin-2 (IL-2) and gamma IFN, linked to at least one RTX toxin epitope (preferably the sequence shown in AAW13865). The RTX toxin used to provide the epitope sequence is preferably a leukotoxin, especially the full-length Pasteurella haemolytica leukotoxin. Alternatively, the leukotoxin is a truncated leukotoxin activity, especially LKT352. The chimeric proteins can be used for the production if vaccines against respiratory diseases such as pneumonia, particularly fibrinous pneumonia caused by P. haemolytica, including shipping fever in cattle.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          RTX cytotoxin; cytokine; immunogen; chimeric protein; cytokine; interleukin-2; IL-2; gamma interferon; gamma IFN; leukotoxin; p: Pasteurella haemolytica; LKT352; respiratory disease; shipping

Pasteurella species, especially Pasteurella vaccine composition. Pasteurella species, especially Pasteurella haemolytica, are responsible for respiratory diseases in a range of agricultural animals, most particularly cattle, but also sheep, pigs, horses and fowl. Shipping fever is the most economically important respiratory disease associated with Pasteurella species, affecting 15-30% of exposed cattle and resulting in a 2-5% mortality rate in the exposed population. The vaccine composition of the invention is useful for preventing or ameliorating respiratory diseases such as pneumonia, particularly shipping fever pneumonia, in livestock.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This sequence represents DNA encoding a fusion protein comprising bovine gamma-interferon (gamma-IFN) and Pasteurella haemolytica leukotoxin (LKT). The fusion protein is immunogenic, and may be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Example

                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The lppB gene protein was expressed in E. coli as a fusion to the Pasteurella haemolytica leukotoxin gene iktA coded for by plasmid pAa352. The llpB gene fragment was taken from pMS11. LppB can be used in vaccines for preventing or treating H. somnus infections, which cause thromboembolic meningo-encephalitis, septicaemia, arthritis
                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence

/note="Vector: pHOS1; Site_1: Btf I; Constructed at The
Institute for Genomic Research (TIGR), Rockville, MD.
Genomic DNA isolated from broth cultures of E. histolytica
using a method described by Clark and Diamond (Clark,
C.G., and Diamond, L.S. (1993) Entamoeba histolytica: a
method for isolate identification. Exp. Parasitol.
77:450.). The DNA was mechanically sheared to give a
tight size distribution (-2 kb). The v + i method used for
the library construction is described in detail in Smith,
H.O. and Venter, J.C. (Making small insert libraries for
whole genome shotgun sequencing projects. In Genome
Sequencing: A Practical Approach, eds. M. Vaudin and B.
Barell, Oxford University Press, 1999)."

Institute for Genomic Research (TIGR), Rockville, MD.
Genomic DNA isolated from broth cultures of E. histolytica
Bsing a method described by Clark and Diamond (Clark,
C.G., and Diamond, L.S. '(193) Entamoeba histolytica: a
method for isolate identification. Exp. Parasitol.
77:450.). The DNA was mechanically sheared to give a
tight size distribution (-2 kb). The v + i method used for
the library construction is described in detail in Smith,
H.O. and Venter, J.C. (Making small insert libraries for
the conservation convencing a protects.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                       whole genome shotgun sequencing projects.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              /clone_lib="Entamoeba histolytica Sheared DNA"
/note="Vector: pHOS1; Site_l: BSt I; Constructed at The
Institute for Genomic Research (TIGR), Rockville, MD.
Genomic DNA isolated from broth cultures of E. histolytica
using a method described by Clark and Diamond (Clark,
C.G., and Diamond, L.S. (1993) Entamoeba histolytica: a
method for isolate identification. Exp. Parasitol.
77:450.). The DNA was mechanically sheared to give a
tight size distribution (~2 kb). The v + i method used for
the library construction is described in detail in Smith,
H.O. and Venter, J.C. (Making small insert libraries for
whole genome shotgun sequencing projects. In Genome
Sequencing: A Practical Approach, eds. M. Vaudin and B.
Barell, Oxford University Press, 1999)."

Institute for Genomic Research (TIGR), Rockville, MD.
Genomic DNA isolated from broth cultures of E. histolytica
using a method described by Clark and Diamond (Clark,
C.G., and Diamond, L.S. (1993) Entamoeba histolytica: a
method for isolate identification. Exp. Parasitol.

77:450.). The DNA was mechanically sheared to give a
tight size distribution (~2 kb). The v + i method used for
the library construction is described in detail in Smith,
H.O. and Venter, J.C. (Making small insert libraries for
whole genome shotgun sequencing projects. In Genome
sequencing: A Practical Approach, eds. M. Vaudin and B.
Barell, Oxford University Press, 1999)."

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          DB
